What is Chemistry for All?
We are working with your school and the Royal Society of Chemistry for the next five years to promote Chemistry as a fun, relevant and accessible subject. We will be running lots of different events, and will survey you to investigate how your participation with the subject evolves as you progress through the programme.

New project leader
Professor Peter Sadler FRS has replaced Dr Paul Taylor as the project leader here at Warwick Chemistry. Peter represented Warwick at a meeting with all participating universities and the RSC at the end of January.

New project officer
Dr Rebecca Kaner joined the project in October 2014 and is its teaching fellow. She will be looking after the project and running events both in school and at Warwick. Rebecca recently completed her PhD in Chemistry.
Initial Surveys
These are being completed by everyone in all our partner schools. This is the first of several surveys that will be carried out over the five year programme and will give us valuable insight into what you think about your interactions with Warwick Chemistry.

“Why is Chemistry Important?”

Successful first launch event
On December 10th Rebecca went to Redditch and successfully ran the first school launch event, looking at where we find Chemistry every day. Our favourite part was when she tried to hammer a nail into a piece of wood with a banana… very handy (and messy!)

Coming up…
Finishing the initial survey, followed by school launch events.

The second event this year will be a Chemistry workshop session run in school. You will work through practical problems with the help of some current Warwick students, and hopefully make some great new discoveries. The university students will also be on hand to tell you about what life is really like at the University of Warwick.

Quiz
Can you name the scientific equipment shown in the pictures??

See you soon!
