Biological Ion Channels Creating a Model

2 Quantum ion channels

Master Equation and Liouvillian Multi-level wells and themalisation

(日) (四) (王) (王) (王) (王)

3 Simple quantum systems - electrons

Motivation for Research

- Ion channels dictate charge transfer through cell membranes.
- Channels contain a small number of ions at any one time.
- Selecivity to particular ions.
- Diameter of channel is comparable to the size of an ion.

Quantum ion channels

Simple quantum systems - electrons

Selectivity Filter

- Four binding sites within selectivity filter ¹.
- Model as square potential wells of equal depth at V = 0.

Quantum ion channels

Simple quantum systems - electrons

Model of selectivity filter

- 1 Coherent evolution between adjacent binding sites.
- 2 Incoherent jumps into, and out of particle reservoirs.
- 3 Radiative decay to lower discrete energy levels within potential well.
- Non-radiative decay (mainly thermal dissipation) to an energetic equilibrium at finite temperature.
- 6 Dephasing
- 6 Thermal hopping between sites

Simple quantum systems - electrons

Unconditional master equation

$$\begin{aligned} \frac{d\rho}{dt} &= \frac{1}{i\hbar} \left[\hat{H}, \rho \right] + \sum_{r=L,R} \Gamma \mathcal{D}[\hat{\sigma}_r] \rho + \Gamma \mathcal{D}[\hat{\sigma}_r^{\dagger}] \rho + \\ \sum_{w} (\bar{n}+1) \gamma \mathcal{D}[\hat{a}_w] \rho + \bar{n} \gamma \mathcal{D}[\hat{a}_w^{\dagger}] \rho \end{aligned}$$

$$\bar{n} = \frac{1}{\exp\left(\frac{\hbar\omega}{K_BT}\right) - 1}$$

Stochastic evolution

- Uncondition master equation is useful to find analytic solution for small systems.
- Use stochastic evolution for larger systems.
- Point processes characterise quantum jumps.
- Hamiltonian evolution for coherent character.

Single well test, for ions

(d) Analytic solution to master equation of in- (e) Geometry and potential landcoherent jumps. Colour scale, red to yellow, scape of system lower to higher energy levels, black is vaccuum state. Solid line V=0, dotted line V=-0.1, dashed line V=+0.1.

Quantum ion channels

Simple quantum systems - electrons

Single well, with two energy levels

Quantum ion channels

Simple quantum systems - electrons

Two symmetric wells, each with two levels

Quantum ion channels

Simple quantum systems - electrons

Three symmetric wells, each with two levels

Quantum ion channels

Simple quantum systems - electrons

Four symmetric wells, each with two levels

Quantum ion channels

Four symmetric wells with an additional asymmetric well

Working to find quantum character for ion channels

- 1 Stochastically evolve ion channel system for selectivity filter.
- 2 Add cavity to selectivity filter.
- **3** Model a conical, extra-cellular region in additon to reservoir.
- 4 Allow 2 to 3 partices in the system at once.
- **5** Take account particle indistinguishability.
