Introduction

5

Ethernet (802.3)

Ethernet physical layer
standards

Ethernet data link
layer (MAC)
Standards

Advanced Ethernet
concepts

Switched Wide Area
Networks (WANs)

- Switched Network Standards
 - Data Link layer standards
 - Switch operation
 - Frame organization
 - Physical layer standards
 - Uses UTP and optical fiber
 - Adds standard-specific signaling

51

Switched Networks

Modern
Communications

David Goodwin
University of
Bedfordshire

Introduction

6

Ethernet (802.3)

Ethernet physical layer
standards

Ethernet data link
layer (MAC)
Standards

Advanced Ethernet
concepts

Switched Wide Area
Networks (WANs)

- LAN Standards: Ethernet
 - Dominant in wired LANs
 - Became dominant because of its low cost and adequate performance

51

The Ethernet Architecture

Modern
Communications

David Goodwin
University of
Bedfordshire

Introduction

Ethernet (802.3)

Ethernet physical layer
standards

Ethernet data link
layer (MAC)
Standards

Advanced Ethernet
concepts

Switched Wide Area
Networks (WANs)

7

- 1960s and 1970s: many organizations worked on methods to connect computers and share data
 - E.g., the ALOHA network at the University of Hawaii
 - 1972: Robert Metcalfe and David Boggs, from Xerox's PARC, developed an early version of Ethernet
 - 1975: PARC released first commercial version (3 Mbps, up to 100 computers, max. 1 km of total cable)
 - DIX developed standard based on Xerox's Ethernet (10 Mbps)
 - 1990: IEEE defined the 802.3 specification
 - Defines how Ethernet networks operate at layers 1-2

51

Switched Networks

Modern
Communications

David Goodwin
University of
Bedfordshire

Introduction

8

Ethernet (802.3)

Ethernet physical layer
standards

Ethernet data link
layer (MAC)
Standards

Advanced Ethernet
concepts

Switched Wide Area
Networks (WANs)

- Switched WANs
 - Leased line networks
 - Company leases lines to connects its sites
 - Installs switches to connect the leased lines
 - Manages the resulting networks

51

Switched Networks

Modern
Communications

David Goodwin
University of
Bedfordshire

Introduction

9

Ethernet (802.3)

Ethernet physical layer
standards

Ethernet data link
layer (MAC)
Standards

Advanced Ethernet
concepts

Switched Wide Area
Networks (WANs)

- Switched WANs
 - Public Switched Data Networks (PSDNs)
 - PSDN vendor manages the switching cloud.
 - Firm only needs to install a single leased line from each site to the vendor's nearest point of presence (POP).
 - Frame Relay is the dominant PSDN standard.
 - Metropolitan area Ethernet is growing.

51

Switched Wide Area
Networks (WANs)

10

ETHERNET (802.3)

51

Creating Ethernet Standards

Modern
Communications

David Goodwin
University of
Bedfordshire

Introduction

Ethernet (802.3)

11

Ethernet physical layer
standards

Ethernet data link
layer (MAC)
Standards

Advanced Ethernet
concepts

Switched Wide Area
Networks (WANs)

- The 802 Committee
 - Committee of the Institute for Electrical and Electronics Engineers (IEEE).
 - IEEE created the 802 LAN/MAN Standards Committee for LAN standards.
 - This committee is usually called the 802 Committee.

51

Creating Ethernet Standards

Modern
Communications

David Goodwin
University of
Bedfordshire

Introduction

Ethernet (802.3)

12

Ethernet physical layer
standards

Ethernet data link
layer (MAC)
Standards

Advanced Ethernet
concepts

Switched Wide Area
Networks (WANs)

- The 802 Committee
 - The 802 Committee creates working groups for specific types of standards.
 - 802.1 for general standards
 - 802.3 for Ethernet standards
 - 802.11 for wireless LAN standards
 - 802.16 for WiMax wireless metropolitan area network standards

51

Creating Ethernet Standards

Modern
Communications

David Goodwin
University of
Bedfordshire

Introduction

Ethernet (802.3)

13

Ethernet physical layer
standards

Ethernet data link
layer (MAC)
Standards

Advanced Ethernet
concepts

Switched Wide Area
Networks (WANs)

- The 802.3 Working Group

- This group is in charge of creating Ethernet standards.
- The terms 802.3 and Ethernet are interchangeable today.
- Figure 6-4 shows Ethernet physical layer standards.
- Ethernet also has data link layer standards (frame organization, switch operation, etc.)

51

Creating Ethernet Standards

Modern
Communications

David Goodwin
University of
Bedfordshire

Introduction

Ethernet (802.3)

Ethernet physical layer
standards

Ethernet data link
layer (MAC)
Standards

Advanced Ethernet
concepts

Switched Wide Area
Networks (WANs)

14

- Ethernet Standards are OSI Standards
 - Layer 1 and Layer 2 standards are almost universally OSI standards.
 - Ethernet is no exception.
 - ISO must ratify them.
 - In practice, when the 802.3 Working Group finishes standards, vendors begin building compliant products.

51

Modern

Introduction

Ethernet (802.3)

Ethernet physical layer
standards

Ethernet data link
layer (MAC)
Standards

Advanced Ethernet
concepts

Switched Wide Area
Networks (WANs)

20

- **Faster Optical Fiber**
 - 1 Gbps with 1,310 nm signaling: 500 m limit
 - 10 Gbps
 - 40 Gbps
 - 100 Gbps

51

Data Link Using Multiple Switches

Modern
Communications

David Goodwin
University of
Bedfordshire

Introduction

Ethernet (802.3)

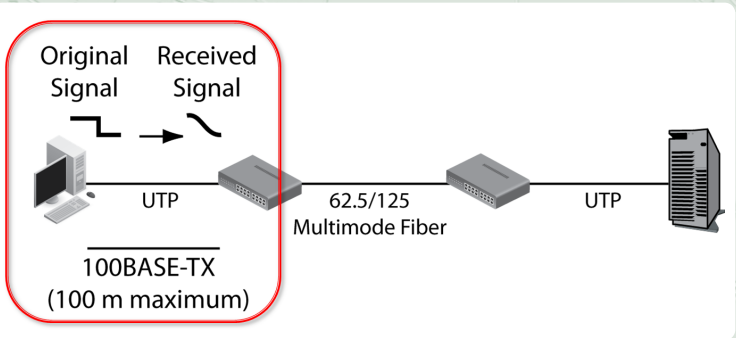

Ethernet physical layer
standards

Ethernet data link
layer (MAC)
Standards

Advanced Ethernet
concepts

Switched Wide Area
Networks (WANs)

21

- The first physical link is 100BASE-TX, so the maximum physical span is 100 meters.

Data Link Using Multiple Switches

Modern
Communications

David Goodwin
University of
Bedfordshire

Introduction

Ethernet (802.3)

Ethernet physical layer
standards

Ethernet data link
layer (MAC)
Standards

Advanced Ethernet
concepts

Switched Wide Area
Networks (WANs)

22

- The switch regenerates the received signal.
- On a 1000BASE-SX link, the clean new signal can travel up to another 220 meters.

Data Link Using Multiple Switches

Modern Communications

David Goodwin
University of Bedfordshire

Introduction

Ethernet (802.3)

Ethernet physical layer standards

Ethernet data link layer (MAC) Standards

Advanced Ethernet concepts

Switched Wide Area Networks (WANs)

23

- The second switch also regenerates the signal.
- The clean regenerated signal goes on.

51

Data Link Using Multiple Switches

Modern
Communications

David Goodwin
University of
Bedfordshire

Introduction

Ethernet (802.3)

Ethernet physical layer
standards

Ethernet data link
layer (MAC)
Standards

Advanced Ethernet
concepts

Switched Wide Area
Networks (WANs)

- Physical links have maximum distance spans, but thanks to regeneration, there is no maximum size to Ethernet network data links.

Modern
Communications

David Goodwin
University of
Bedfordshire

Introduction

Ethernet (802.3)

Ethernet physical layer
standards

Ethernet data link
layer (MAC)
Standards

Advanced Ethernet
concepts

Switched Wide Area
Networks (WANs)

25

ETHERNET DATA LINK LAYER (MAC) STANDARDS

51

Layering in 802 Networks

Modern
Communications

David Goodwin
University of
Bedfordshire

Introduction

Ethernet (802.3)

Ethernet physical layer
standards

Ethernet data link
layer (MAC)
Standards

Advanced Ethernet
concepts

Switched Wide Area
Networks (WANs)

26

Internet Layer	TCP/IP Internet Layer Standards (IP, ARP, etc.)		Other Internet Layer Standards (IPX, etc.)
Data Link Layer			
Physical Layer	100BASE-TX	1000BASE-SX	...
			Non-Ethernet Layer 1 Standards (802.11, etc.)

- Ethernet has many physical layer standards.

51

Layering in 802 Networks

Modern
Communications

David Goodwin
University of
Bedfordshire

Introduction

Ethernet (802.3)

Ethernet physical layer
standards

Ethernet data link
layer (MAC)
Standards

Advanced Ethernet
concepts

Switched Wide Area
Networks (WANs)

27

Internet Layer		TCP/IP Internet Layer Standards (IP, ARP, etc.)		Other Internet Layer Standards (IPX, etc.)	
Data Link Layer	Logical Link Control Layer	802.2			
	Media Access Control Layer	Ethernet 802.3 MAC Layer Standard		Non-Ethernet MAC Standards (802.11, 802.16, etc.)	
Physical Layer		100BASE-TX	1000BASE-SX

- The 802 Committee divided the data link layer into logical link control and media access control layers.

51

Layering in 802 Networks

Modern
Communications

David Goodwin
University of
Bedfordshire

Introduction

Ethernet (802.3)

Ethernet physical layer
standards

Ethernet data link
layer (MAC)
Standards

Advanced Ethernet
concepts

Switched Wide Area
Networks (WANs)

28

Internet Layer		TCP/IP Internet Layer Standards (IP, ARP, etc.)	Other Internet Layer Standards (IPX, etc.)	
Data Link Layer	Logical Link Control Layer	802.2		
	Media Access Control Layer	Ethernet 802.3 MAC Layer Standard		Non-Ethernet MAC Standards (802.11, 802.16, etc.)
Physical Layer		100BASE-TX	1000BASE-SX	...

- The logical link control layer handles general work for all 802 standards.
- There is a single LLC standard, 802.2. In practice, it has no significance for Ethernet LAN managers.

51

Layering in 802 Networks

Modern
Communications

David Goodwin
University of
Bedfordshire

Introduction

Ethernet (802.3)

Ethernet physical layer
standards

Ethernet data link
layer (MAC)
Standards

Advanced Ethernet
concepts

Switched Wide Area
Networks (WANs)

29

Internet Layer		TCP/IP Internet Layer Standards (IP, ARP, etc.)	Other Internet Layer Standards (IPX, etc.)		
Data Link Layer	Logical Link Control Layer	802.2			
	Media Access Control Layer	Ethernet 802.3 MAC Layer Standard		Non-Ethernet MAC Standards (802.11, 802.16, etc.)	
Physical Layer		100BASE-TX	1000BASE-SX

- The MAC layer handles standard-specific matters.
- Implementers must understand MAC layer standards.

51

Layering in 802 Networks

Modern
Communications

David Goodwin
University of
Bedfordshire

Introduction

Ethernet (802.3)

Ethernet physical layer
standards

Ethernet data link
layer (MAC)
Standards

Advanced Ethernet
concepts

Switched Wide Area
Networks (WANs)

30

Internet Layer		TCP/IP Internet Layer Standards (IP, ARP, etc.)	Other Internet Layer Standards (IPX, etc.)	
Data Link Layer	Logical Link Control Layer	802.2		
	Media Access Control Layer	Ethernet 802.3 MAC Layer Standard		Non-Ethernet MAC Standards (802.11, 802.16, etc.)
Physical Layer		100BASE-TX	1000BASE-SX	...

- Ethernet only has a single MAC layer standard.

51

Ethernet MAC Layer Frame

Modern
Communications

David Goodwin
University of
Bedfordshire

Introduction

Ethernet (802.3)

Ethernet physical layer
standards

Ethernet data link
layer (MAC)
Standards

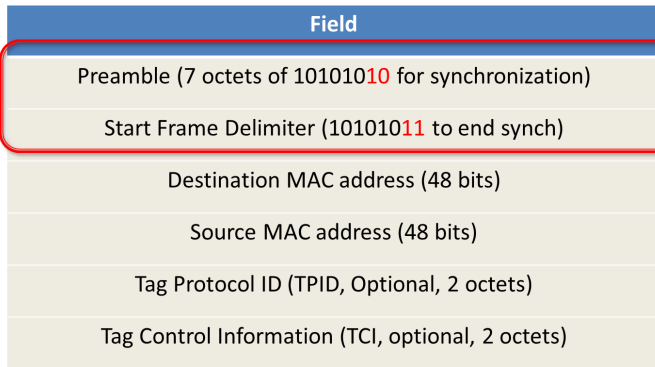

Advanced Ethernet
concepts

Switched Wide Area
Networks (WANs)

31

51

- The first two fields synchronize the receiver's clock with the sender's clock.
- If this was not done, the receiver might read bit 1,012 when it is really bit 1,102.

Ethernet MAC Layer Frame

Modern
Communications

David Goodwin
University of
Bedfordshire

Introduction

Ethernet (802.3)

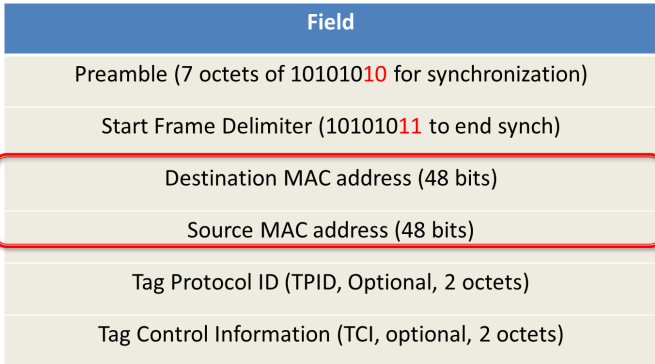

Ethernet physical layer
standards

Ethernet data link
layer (MAC)
Standards

Advanced Ethernet
concepts

Switched Wide Area
Networks (WANs)

32

- The MAC address fields are 48 bits long.
- They are represented for humans in hexadecimal notation (Base 16).

51

Hexadecimal Notation

Modern
Communications

David Goodwin
University of
Bedfordshire

Introduction

Ethernet (802.3)

Ethernet physical layer
standards

Ethernet data link
layer (MAC)
Standards

Advanced Ethernet
concepts

Switched Wide Area
Networks (WANs)

33

4 Bits	Decimal (Base 10)	Hexadecimal (Base 16)
0000	0	0 hex
0001	1	1 hex
0010	2	2 hex
0011	3	3 hex
0100	4	4 hex
0101	5	5 hex
0110	6	6 hex
0111	7	7 hex

4 Bits	Decimal (Base 10)	Hexadecimal (Base 16)
1000	8	8 hex
1001	9	9 hex
1010	10	A hex
1011	11	B hex
1100	12	C hex
1101	13	D hex
1110	14	E hex
1111	15	F hex

51

Hexadecimal Notation

Modern
Communications

David Goodwin

Bedfordshire

Introduction

Ethernet (802.3)

Ethernet physical layer
standards

Ethernet data link
layer (MAC)
Standards

Advanced Ethernet
concepts

Switched Wide Area
Networks (WANs)

34

- Divide a 48-bit Ethernet address into 12 four-bit “nibbles”.
- Convert each nibble into a Hex symbol.
- Combine two hex symbols into pairs and place a dash between pairs.
- For example, A1-36-CD-7B-DF hex begins with 10100001 for A1, followed by 00110110 for 36.

51

Ethernet MAC Layer Frame

Modern
Communications

David Goodwin
University of
Bedfordshire

Introduction

Ethernet (802.3)

Ethernet physical layer
standards

Ethernet data link
layer (MAC)
Standards

Advanced Ethernet
concepts

Switched Wide Area
Networks (WANs)

35

Field
Preamble (7 octets of 10101010 for synchronization)
Start Frame Delimiter (10101011 to end synch)
Destination MAC address (48 bits)
Source MAC address (48 bits)
Tag Protocol ID (TPID, Optional, 2 octets)
Tag Control Information (TCI, optional, 2 octets)
Length (2 octets)
Logical Link Control (LLC subheader, 8 octets)
Packet (variable length)
PAD (Situation-Specific)
Frame Check Sequence

- The TPID and TCI fields are optional. They are used to add priority levels of VLAN numbers.

51

Ethernet MAC Layer Frame

Modern
Communications

David Goodwin
University of
Bedfordshire

Introduction

Ethernet (802.3)

Ethernet physical layer
standards

Ethernet data link
layer (MAC)
Standards

Advanced Ethernet
concepts

Switched Wide Area
Networks (WANs)

36

Field
Preamble (7 octets of 10101010 for synchronization)
Start Frame Delimiter (10101011 to end synch)
Destination MAC address (48 bits)
Source MAC address (48 bits)
Tag Protocol ID (TPID, Optional, 2 octets)
Tag Control Information (TCI, optional, 2 octets)
Length (2 octets)
Logical Link Control (LLC subheader, 8 octets)
Packet (variable length)
PAD (Situation-Specific)
Frame Check Sequence

- The length field gives the length of the data field, not the total length of the frame.

51

Ethernet MAC Layer Frame

Modern
Communications

David Goodwin
University of
Bedfordshire

Introduction

Ethernet (802.3)

Ethernet physical layer
standards

Ethernet data link
layer (MAC)
Standards

Advanced Ethernet
concepts

Switched Wide Area
Networks (WANs)

37

Field
Preamble (7 octets of 10101010 for synchronization)
Start Frame Delimiter (10101011 to end synch)
Destination MAC address (48 bits)
Source MAC address (48 bits)
Tag Protocol ID (TPID, Optional, 2 octets)
Tag Control Information (TCI, optional, 2 octets)
Length (2 octets)
Logical Link Control (LLC subheader, 8 octets)
Packet (variable length)
PAD (Situation-Specific)
Frame Check Sequence

- The data field has two fields.
- The LLC subheader identifies the type of packet in the data field.
- The packet has variable length.

51

Ethernet MAC Layer Frame

Modern
Communications

David Goodwin
University of
Bedfordshire

Introduction

Ethernet (802.3)

Ethernet physical layer
standards

Ethernet data link
layer (MAC)
Standards

Advanced Ethernet
concepts

Switched Wide Area
Networks (WANs)

38

Field
Preamble (7 octets of 10101010 for synchronization)
Start Frame Delimiter (10101011 to end synch)
Destination MAC address (48 bits)
Source MAC address (48 bits)
Length (2 octets)
Logical Link Control (LLC subheader, 8 octets)
Packet (variable length)
PAD (Situation-Specific)
Frame Check Sequence

- The PAD field is added by the sender only if the data field is less than 46 octets.
- The PAD field is selected so that the total of the length field and the pad is 46 octets.

51

Ethernet MAC Layer Frame

Modern
Communications

David Goodwin
University of
Bedfordshire

Introduction

Ethernet (802.3)

Ethernet physical layer
standards

Ethernet data link
layer (MAC)
Standards

Advanced Ethernet
concepts

Switched Wide Area
Networks (WANs)

39

Field
Preamble (7 octets of 10101010 for synchronization)
Start Frame Delimiter (10101011 to end synch)
Destination MAC address (48 bits)
Source MAC address (48 bits)
Length (2 octets)
Logical Link Control (LLC subheader, 8 octets)
Packet (variable length)
PAD (Situation-Specific)
Frame Check Sequence

- The Frame Check Sequence field is for error detection.
- If an error is found, the frame is discarded.
- There is no error message or request for transmission.
- Ethernet is not reliable.

50

- Carriers

- Beyond their physical premises, companies must use the services of regulated carriers.
- Carriers have rights of way for transmission in public areas.
- Companies are limited to whatever services the carriers provide.
- Prices for carrier services change abruptly and without technological reasons.
- Prices and service availability vary from country to country.

Switched Wide Area
Networks (WANs)

51

- High Costs and Low Speeds
 - High cost per bit transmitted, compared with LANs
 - Consequently, lower speeds (most commonly 256 kbps to about 50 megabits per second)

51
