

PRINCIPLES OF MODERN COMMUNICATIONS WIRELESS NETWORKING

based on 2011 lecture series by Dr. S. Waharte.
Department of Computer Science and Technology,
University of Bedfordshire.

16th January 2013

Outline

Modern
Communications

David Goodwin
University of
Bedfordshire

802.11 LAN
management

Other local wireless
technologies

Cellular technology

- 1 802.11 LAN management
- 2 Other local wireless technologies
- 3 Cellular technology

802.11 LAN
management

Other local wireless
technologies

Cellular technology

3

802.11 LAN MANAGEMENT

40

WLAN Management

Modern
Communications

David Goodwin
University of
Bedfordshire

802.11 LAN
management

Other local wireless
technologies

Cellular technology

4

- Access Points Placement in a Building
 - Must be done carefully for good coverage and to minimize interference between access points.
 - Lay out 30-meter to 50-meter radius circles on blueprints.
 - Adjust for obvious potential problems such as brick walls.
 - In multistory buildings, must consider interference in three dimensions.

40

WLAN Management

Modern
Communications

David Goodwin
University of
Bedfordshire

802.11 LAN
management

Other local wireless
technologies

Cellular technology

5

- Access Points Placement in a Building

- Install access points and do site surveys to determine signal quality.
- Adjust placement and signal strength as needed.
- In commercial access points, signal strength and other configuration information can be actively controlled.

40

WLAN Management

Modern
Communications

David Goodwin
University of
Bedfordshire

802.11 LAN
management

Other local wireless
technologies

Cellular technology

6

- Remote Access Point Management
 - The manual labour to manage many access points can be very high.
 - They must be managed.

40

Wireless Access Point Management Alternatives

Modern Communications

802.11 LAN management

Other local wireless technologies

Cellular technology

WLAN Management

Modern
Communications

David Goodwin
University of
Bedfordshire

802.11 LAN
management

Other local wireless
technologies

Cellular technology

8

- Remote Access Point Management
 - Desired functionality:
 - Notify the WLAN administrators of failures immediately.
 - Support remote access point adjustment.
 - Should provide continuous transmission quality monitoring.
 - Allow software updates to be pushed out to all access points or WLAN switches.
 - Work automatically whenever possible.

802.11 LAN
management

Other local wireless
technologies

Cellular technology

9

OTHER LOCAL WIRELESS TECHNOLOGIES

40

Bluetooth

Modern
Communications

David Goodwin
University of
Bedfordshire

802.11 LAN
management

Other local wireless
technologies

Cellular technology

10

- For Personal Area Networks (PANs)
 - Devices on a person's body and nearby (earphone, mobile phone, netbook computer, etc.)
 - Devices around a desk (computer, mouse, keyboard, printer)

40

Bluetooth

Modern
Communications

David Goodwin
University of
Bedfordshire

802.11 LAN
management

Other local wireless
technologies

Cellular technology

11

- Cable Replacement Technology
 - For example, with a Bluetooth phone, you can print wirelessly to a nearby Bluetooth-enabled printer
 - Does not use access points
 - Uses direct device-to-device communication

40

Bluetooth

Modern
Communications

David Goodwin
University of
Bedfordshire

802.11 LAN
management

Other local wireless
technologies

Cellular technology

12

- Advantages Compared with 802.11
 - Low battery power drain, so long battery life between recharges
 - Bluetooth profiles (printing, earphones, two-way headsets, wireless keyboards and mice, etc.)
 - No need to do device-specific configuration for each device pair
 - Somewhat rudimentary
 - Devices typically automate only a few Bluetooth profiles

40

Emerging Local Wireless Technologies

Modern
Communications

David Goodwin
University of
Bedfordshire

802.11 LAN
management

Other local wireless
technologies

Cellular technology

13

- Ultrawideband (UWB)
 - Uses channels several gigahertz wide (spans multiple frequency bands)
 - Low power per hertz to avoid interference still gives very high speeds
 - But limited to short distances
 - Wireless USB provides 480 Mbps up to 3 meters, 110 Mbps up to 10 meters

40

Bluetooth

Modern
Communications

David Goodwin
University of
Bedfordshire

802.11 LAN
management

Other local wireless
technologies

Cellular technology

14

- Disadvantages Compared with 802.11
 - Short distance (10 meters)
 - Low speed (3 Mbps today with a slower reverse channel)
- Bluetooth 3.0
 - Can switch to 802.11 radio transmission for higher speeds than traditional Bluetooth provided

40

802.11 Bluetooth

Modern
Communications

David Goodwin
University of
Bedfordshire

802.11 LAN
management

Other local wireless
technologies

Cellular technology

15

- Major Bluetooth Standards
- 2.0 and 2.1 + EDR
 - This is the currently dominant Bluetooth standard
 - EDR is Enhanced Data Rate
 - 3 Mbps with a slower back channel
 - 2.1 products became available in 2010

40

802.11 Bluetooth

Modern
Communications

David Goodwin
University of
Bedfordshire

802.11 LAN
management

Other local wireless
technologies

Cellular technology

16

- Major Bluetooth Standards
- 3.0 + HS
 - Adopted but not widely used
 - Can operate over 802.11 transmission processes
 - 802.11 speeds but no access points
 - Better security

40

802.11 Bluetooth

Modern
Communications

David Goodwin
University of
Bedfordshire

802.11 LAN
management

Other local wireless
technologies

Cellular technology

17

- Propagation Distances
 - Bluetooth Class 1
 - Higher-power devices that can reach 100 meters
 - Rare
 - Bluetooth Class 2
 - Lower-power radio
 - 10-meter propagation distance
 - The norm

40

802.11 Bluetooth

Modern
Communications

David Goodwin
University of
Bedfordshire

802.11 LAN
management

Other local wireless
technologies

Cellular technology

18

- Bluetooth Profiles for Phones

- Headset Profile

- Basic actions such as accepting incoming calls, ending calls, controlling volume

- Hands-Free Profile

- More capabilities
 - Redial last number called
 - Call waiting
 - Dial by speaking

40

802.11 Bluetooth

Modern
Communications

David Goodwin
University of
Bedfordshire

802.11 LAN
management

Other local wireless
technologies

Cellular technology

19

- Other Bluetooth Profiles

- Remote Control Profile to control your music devices
- Advanced Audio Distribution Profile for music streaming
- Object Push Profile to send business cards and other information to another phone
- More coming

40

Emerging Local Wireless Technologies

Modern
Communications

David Goodwin
University of
Bedfordshire

802.11 LAN
management

Other local wireless
technologies

Cellular technology

20

- 802.11 and Bluetooth are not the only local wireless technologies.
- ZigBee
 - For almost-always-off sensor networks at low speeds
 - Very long battery life
 - 250 kbps maximum

40

Emerging Local Wireless Technologies

Modern
Communications

David Goodwin
University of
Bedfordshire

802.11 LAN
management

Other local wireless
technologies

Cellular technology

21

- RFIDs
 - Like bar code tags but readable remotely
 - Some are powered by the scanner's energy

40

Emerging Local Wireless Technologies

Modern
Communications

David Goodwin
University of
Bedfordshire

802.11 LAN
management

Other local wireless
technologies

Cellular technology

22

- Software-Defined Radio
 - Can implement multiple wireless protocols
 - No need to have separate radio circuits for each protocol
 - Reduces the cost of multi-protocol devices

40

Modern
Communications

David Goodwin
University of
Bedfordshire

802.11 LAN
management

Other local wireless
technologies

Cellular technology

23

CELLULAR TECHNOLOGY

40

Cellular Technology

Modern
Communications

David Goodwin
University of
Bedfordshire

802.11 LAN
management

Other local wireless
technologies

Cellular technology

24

- A geographical area is divided into areas called cells.
- Each cell has a cellsite with a transmitter/receiver.

40

Cellular Technology

Modern
Communications

David Goodwin
University of
Bedfordshire

802.11 LAN
management

Other local wireless
technologies

Cellular technology

25

- The route of a cellular telephone call to a wireline customer.

40

Cellular Technology

Modern
Communications

David Goodwin
University of
Bedfordshire

802.11 LAN
management

Other local wireless
technologies

Cellular technology

26

- The MTSO constantly monitors and controls all cellsites in a cellular system.

40

Cellular Technology

Modern
Communications

David Goodwin
University of
Bedfordshire

802.11 LAN
management

Other local wireless
technologies

Cellular technology

27

Reuse of Channel 47
in Cells A, D, and F.

Allows a cellular
operator to serve more customers
for each authorized channel.

40

Cellular Technology

Modern
Communications

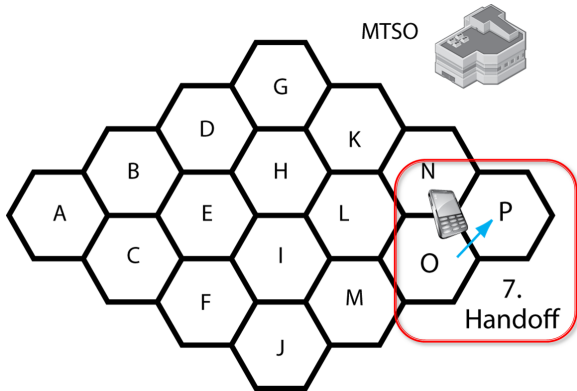

David Goodwin
University of
Bedfordshire

802.11 LAN
management

Other local wireless
technologies

Cellular technology

28

- In cellular telephony, a handoff takes place when you move between cells. A new cellsite serves you. The MTSO manages the handoff.

40

Handoffs and Roaming: 802.11 v Cellular

Modern
Communications

David Goodwin
University of
Bedfordshire

802.11 LAN
management

Other local wireless
technologies

Cellular technology

29

	802.11 WLANs	Cellular Telephony
Relationship	Handoff and roaming mean the <i>same thing</i> .	Handoff and roaming mean <i>different things</i> .
Handoffs (means the same in both)	Wireless host travels between access points in an organization.	Mobile phone travels between cellsites in the <i>same</i> cellular system.
Roaming (means different things)	Wireless host travels between access points in an organization.	Mobile phone travels to a <i>different</i> cellular system.

40

Generations of Cellular

Modern
Communications

David Goodwin
University of
Bedfordshire

802.11 LAN
management

Other local wireless
technologies

Cellular technology

30

- Generation 1 (1G)
 - Introduced around 1980
 - Analog signaling only
 - Data transmission difficult, limited to 10 kbps

40

Generations of Cellular

Modern
Communications

David Goodwin
University of
Bedfordshire

802.11 LAN
management

Other local wireless
technologies

Cellular technology

31

- Generation 2 (2G)

- Introduced around 1990
- All-digital, so clean signals
- Still limited to 10 kbps
- Sufficient for texting and the exchange of low-quality photos

40

Generations of Cellular

Modern
Communications

David Goodwin
University of
Bedfordshire

802.11 LAN
management

Other local wireless
technologies

Cellular technology

32

- Generation 3 (3G)

- Introduced around 2000
- Typical speed 300 kbps to 500 kbps
- Sufficient for somewhat sluggish Web access
- Sufficient for low-quality video
- Sufficient for exchanging high-quality photographs

40

Generations of Cellular

Modern
Communications

David Goodwin
University of
Bedfordshire

802.11 LAN
management

Other local wireless
technologies

Cellular technology

33

- Generation 4 (4G)
 - Introduced around 2010
 - Typical speed 3 Mbps to 5 Mbps
 - X10 over 3G
 - Eventually, 100 Mbps to mobile users and 1 Gbps to stationary users
 - Sufficient for high-definition video
 - Runs over IP

40

Generations of Cellular

Modern
Communications

David Goodwin
University of
Bedfordshire

802.11 LAN
management

Other local wireless
technologies

Cellular technology

34

- Generation 4 (4G)
 - Designed to give at least 2 Mbps download speeds to fixed customers
 - Designed to give at least 100 Mbps download speeds to fixed customers
 - Throughput lower in practice
 - Will be needed for high-definition video

40

Generations of Cellular

Modern
Communications

David Goodwin
University of
Bedfordshire

802.11 LAN
management

Other local wireless
technologies

Cellular technology

35

- Generation 4 (4G)
 - There are two competing technologies.
 - WiMAX 4G technology.
 - Based on 802.16 standard.
 - WiMAX forum promotes WiMAX and does interoperability testing.
 - 802.16m will eventually provide 100 Mbps to mobile users and 1 Gbps to stationary users.

40

Generations of Cellular

Modern
Communications

David Goodwin
University of
Bedfordshire

802.11 LAN
management

Other local wireless
technologies

Cellular technology

36

- Generation 4 (4G)
 - There are two competing 4G technologies.
 - Long-Term Evolution (LTE)
 - The 4G technology that most cellular carriers have adopted.
 - Not full 4G technology.
 - LTE Advanced will provide 100 Mbps to mobile users and 1 Gbps to stationary users.

40

Generations of Cellular

Modern
Communications

David Goodwin
University of
Bedfordshire

802.11 LAN
management

Other local wireless
technologies

Cellular technology

37

- Lies, Damned Lies, and Mobile Speeds
 - Mobile speeds vary widely.
 - All users share the capacity of a cellsite.
 - Usage will vary with the number of simultaneous users.
 - Distance from a transmitter means slower speeds.
 - Speeds are not equal in all parts of a city.
 - Buildings and other obstructions may create local areas of poor service.

40

Cellular-802.11 Convergence

Modern
Communications

David Goodwin
University of
Bedfordshire

802.11 LAN
management

Other local wireless
technologies

Cellular technology

38

- Traditional Roles
 - 802.11: networking within a firm
 - Cellular telephony: service outside the firm
 - Growing convergence

802.11

Cellular

40

Cellular-802.11 Convergence

Modern
Communications

David Goodwin
University of
Bedfordshire

802.11 LAN
management

Other local wireless
technologies

Cellular technology

39

- 3G Mobile Smartphones

- Often can connect directly to an 802.11 WLAN for service
- Typically faster speeds than cellular for data
- Cellular companies like offloading flat-fee subscribers to the WLAN

40

Cellular-802.11 Convergence

Modern
Communications

David Goodwin
University of
Bedfordshire

802.11 LAN
management

Other local wireless
technologies

Cellular technology

- Some Smart Phones Can Act as 802.11 Access Points
 - Several 802.11 users can share its capacity.

40

40
