Google Flu has caused people to debate the topic of big data in epidemiology and the usefulness of large dataset analysis. Discussions at this workshop will range from the medical motivation for surveillance, to whether the statistical models fitted to such data should be derived from a mechanistic stochastic model of transmission or be more generic.

Speakers

Christian Stefansen (Google Flu)
Real-time syndromic surveillance team
(Public Health England)

Lydia Drumright (University of Cambridge)

Thomas House (University of Warwick)
