Current Research

Working Papers on Dictatorship and Secrecy

This project is about the political economy of Soviet secrecy. The Soviet Union had one of the most secretive systems of government that the world has known. Secrecy was one of the mechanisms of power in the Soviet dictatorship. Soviet leaders used secrecy, apparently, to shelter decisions from popular pressure, gain strategic advantages at home and abroad, and protect their reputations. There are clear reasons why people at the top gained from secrecy. To understand how they got away with it, we also have to work out why secrecy was respected by people in the middle and accepted by people at the bottom. Everyone's motivations had to be aligned to uphold secrecy, whether by self-interest or force. Directly and indirectly, secrecy is costly, and everyone had to be willing to pay the opportunity costs. Otherwise, Moscow's secrets would have been sold or shared all the time, as happens so often in London and Washington. This makes secrecy an economic problem. I have been collecting the empirical materials for historical investigation of this problem over a number of years, and am continuing to do so.
