provisions of jobs, youth unemployment; and private sector jobs.
- Youth unemployment constitutes a major theme of the discussion.

ii) Right to Social Security:
- indicators of status are the state’s ranking in the UNDP Human Development Report 2010, and the provision of information about the way in which the social security system operates and the benefits conferred. Beyond this, the discussion constitutes a description of initiatives.

iii) Right to Education:
- analysis begins with an outline of the existing legal provisions, initiatives, and governmental objectives;
- indicators include school enrolment rates (relative to sub-Saharan Africa), teaching staff, teacher training, equipment, workshops and playgrounds, courses, classroom numbers and conditions, security, and number of pupils, as well as education financing.

iv) Right to Health:
- again, discussion of initiatives and existing report!.

ii) Right to Social Security:
- no criticism.

iii) Right to Education:
- reference is made to a few damning incidents: for instance, para 208: with regard to security in the vicinity of schools and universities, aware that there had been a number of violent incidents in certain educational institutions...
| a) Egypt & b) Combined second to fourth periodic report | measures, | Cannot locate any (although this is not to say that there are none). |
|-----------------------------------------------|-----------------------------------------------|
| i) Right to Work: | 
- the discussion notes the implementation of a new Labour Code;  
- otherwise, we are told to ‘refer... to Egypt’s previous report and the Annex containing its replies to the Committee’s questions’ (para 135). |
| ii) Right to Social Security: | 
- again reference is made to Egypt’s previous report;  
- however, the discussion goes on to provide significant statistical and financial indicators on the practical application of the legislation, including number of social insurance recipients and benefits paid, number of insured persons and pensions, number of social security support recipients and benefits paid, and a discussion of judicial applications. |
| iii) Right to Education: | 
- provision of initiatives to improve the right to education;  
- numerous indicators are used to illustrate the existing position, including: - no. of schools, classrooms students |
| i) Right to Work: | 
- virtually no comment, with reference to previous report. |
| ii) Right to Social Security: | 
- no obvious allusion to decline in performance. |
| iii) Right to Education: | 
- para 280 provides criticism of the existing position: ‘observation has revealed that the education system is unsatisfactory in some respects. Theory rather than practice tends to predominate. Competence levels among personnel in charge of monitoring and assessment are low. There is no integrated assessment system based on clearly defined criteria for the evaluation of reaching outcomes. Learner assessment methods and tools are inadequate, the institutional working environment is unsatisfactory...’ |
| iv) Right to Health: | 
- very little criticism, if any. |
in technical education sectors, change over time in schools and pupil numbers, spending on university education, and number of faculty members and assistants at State universities.

iv) Right to Health:
- discussion of legal position, and institutional structure;
- statistical indicators are used to show how health care delivery services have evolved over time. These include: health care spending, number of hospital beds, cost per patient, and patients sent abroad.
- new initiatives are also discussed.
- there is also discussion of environmental aspects, industrial aspects, disease, immunisation, and health insurance, amongst other things.

i) Right to Work:
- discussion begins with a description of the legal position, and latterly incorporates discussion of the measures undertaken with respect to employment. It is noteworthy, however, that ‘Togo has no statistics enabling it to assess the precise level of employment and its development’ (para 331 – see also paragraph 358) – there is also some discussion of vocational training, and some recognition of a ‘high rate of unemployment’ among the young owing to under-funding of education and the vocational training system (346).
- para 350 notes that girls are underrepresented in technical and vocational education, as well as in the industrial sector.
- a separate theme addressed is violations of the principle of equality.

ii) Right to Social Security:
- description of the contemporary social security regimes implemented in the state;
- however, it is noted (para 421 onwards) that ‘the

Cannot locate any (although this is not to say that there are none).

i) Right to Work:
- there is some recognition of the failings of the state’s current compliance with Article 6 (namely, in relation to gender equality, and a high rate of unemployment among the young). However, there is an insufficiency of analytical/critical content, owing apparently to the lack of reliable statistics (para 358).

ii) Right to Social Security:
- para 399 notes that ‘the aspect of health and safety at work, which constitutes a basic pillar of social welfare, was neglected for a long time. Work-related diseases, deaths and accidents are legion. This is because the legislation is out of date or incomplete, the institutions atrophied or non-operational, risk mapping is non-existent, qualified staff are not available...’ (see also the content of column i).

iii) Right to Education:
- candid approach to statistical data. For instance, para 639: ‘Illiteracy affects
provisions described above are by means applied’;
- no statistical data is provided (neither are qualitative data referencing particular indicators).

iii) Right to Education:
- description of government initiatives;
- provision of literacy statistics, and sources of funding;
- discussion of the teaching profession and the teacher-training programme, with measures taken or envisaged to improve the standard of teaching staff;
- gender equality (and corresponding statistics).

iv) Right to Health:
- description of national health policy and prospective initiatives for improvement;
- statistics and situation in relation to vaccination coverage, immunisation, child care, and pre-natal care;
- discussion of financial issues pertaining to the realisation of art 12.
- statistics by way of indicators, the latter including infant mortality rate, child mortality rate, 1,338,563, with the illiteracy rate thus amounting 43.1 per cent. That general situation is further characterised by differences linked to gender, place of residence, age and socio-economic status’.
- para 647 also provides a list of ‘difficulties and setbacks’... including, by way of illustration, ‘the failure to cater for the 9 to 14 age group’.

iv) Right to Health:
- again, very open in its discussion of the ineptitude of state measures in complying with Art 12. For example: para 585: ‘the health care system is suffering from acknowledged public underfunding, with the result that the financial burden is shifted on to households’.
maternal mortality rate, incidence of HIV, rate of sight loss for TB sufferers, and health-care budget as a proportion of the general budget.
- the discussion is subdivided further into services, human resources, long-term policy, pharmaceutical policy and specific discussion of a forthcoming initiative.

right to education. It also acknowledges the difficulties with realising the right; notably, difficulties arising from the ‘lack of enabling legislation on compulsory education and from shortfalls in educational services and continuity’ (para 366), and a below-average completion cycle;

- the report also provides statistical data on primary, secondary, and higher education, as well as technical and vocational training.

- the report uses the following indicators to measure performance:
  a) the gross enrolment rate;
  b) the gross admission rate;
  c) the percentage of girls in primary school;
  d) the retention rate;
  e) the percentage of all-age schools (each of which is discussed in detail).

iv) The Right to Health:

- the report provides information on the state’s health objectives and strategic approaches, as well as ‘health statistics’, using maternal mortality rate, infant mortality rate, infant and child mortality rate, 5-
<table>
<thead>
<tr>
<th>km health coverage, HIV/AIDS prevalence, percentage of immunized children aged 12-13 months, and percentage of women who have given birth in the past year with pre-natal care, as indicators. There is also in-depth discussion of financing mechanisms and the sectoral environment.</th>

<tr>
<td>i) Right to Work: - the discussion is divided into a) an introductory section, outlining the legal framework; b) policy directions to ensure full employment; c) technical and vocational training programs; d) Employment profile in Ethiopia; e) Institutional mechanisms. The discussion is quite thorough in its discussion of initiatives introduced to reduce unemployment. - statistical data is provided to demonstrate the unemployment rate. ii) Right to social security: - Again, the analysis begins with a (detailed) description of the legal situation regarding the promotion of the right to social security and social insurance, and the benefits to which certain individuals are entitled. The discussion is divided into a) an introductory section, outlining the legal framework; b) policy directions to ensure full employment; c) technical and vocational training programs; d) Employment profile in Ethiopia; e) Institutional mechanisms. The discussion is quite thorough in its discussion of initiatives introduced to reduce unemployment. - statistical data is provided to demonstrate the unemployment rate. iii) Right to social security: - Again, the analysis begins with a (detailed) description of the legal situation regarding the promotion of the right to social security and social insurance, and the benefits to which certain individuals are entitled. The discussion is divided into a) an introductory section, outlining the legal framework; b) policy directions to ensure full employment; c) technical and vocational training programs; d) Employment profile in Ethiopia; e) Institutional mechanisms. The discussion is quite thorough in its discussion of initiatives introduced to reduce unemployment. - statistical data is provided to demonstrate the unemployment rate. i) Right to Work: - there is some recognition of deterioration in unemployment, and inequality between prospective male and female employment. Thus, with regard to the former (para 64): ‘in the 1994 Population and Housing Census, the urban unemployment rate was 22%; it increased to 26.4% by 1999’ As for the latter (para 61): ‘unemployment rates for men and women are 13.7% and 27.2% respectively, indicating that unemployment is significantly greater for women than men’. Notably, though, the discussion under the heading ‘employment trends’ is exclusively positive, with no recognition of decline or</td>
</tr>
</tbody>
</table>
analysis is largely
descriptive of the
entitlements available; there
is also some discussion of
reform initiatives, but there
is no statistical data to
furnish a comprehensive
account of the current
situation in relation to the
state’s performance.

iii) The Right to Education:
- there is detailed discussion
of initiatives implemented
to improve education, and
the efforts to which the
government has already
gone to secure the right to
education.
- there is also implicit
recognition of existing
deficiencies in the education
system (see column iii).
- statistical data is provided

enrolment rates.

iv) The Right to Health:
- the account describes
measures taken to
ameliorate access to health
care;
- statistical data is provided
to supplement the report’s
discussion (i.e. recognition)
of deficiencies (para 275:
‘malnutrition remains the
underlying cause of death in
about 54% of the cases’), as
stagnation. Rather, it
seems to focus on selective
initiatives generating
positive employment
outcomes.

ii) The Right to Social
Security:
- the critical discussion
with regard to the state’s
performance in securing
this right is located in para
158: ‘the social security
coverage is limited. The
social security provided
for citizens in the formal
and non-formal sectors of
the economy is not
adequate. Coverage by
public pension is limited to
public servants...’ There is
no qualitative or
quantitative data to
illustrate the extent of the
insufficiency.

iii) The Right to
Education:
- there is some recognition
of previous deficiencies:
para 336: ‘previously, the
country’s education
system has faced
numerous challenges in
terms of access, quality
and content.’
- On the subject of primary
education, para 345 notes
that ‘the gender gap by
well as the positive implications of governmental initiatives thus far (para 278: ‘accordingly, 76% coverage has been achieved, yet the subsequent year 2007/08 has showed a slight decline due to different problems’; - the account appears to be largely thorough.

* there are a great deal more statistics provided in an accessible format in the Annex to the report.

<table>
<thead>
<tr>
<th>Para</th>
<th>Text</th>
</tr>
</thead>
<tbody>
<tr>
<td>278</td>
<td>accordingly, 76% coverage has been achieved, yet the subsequent year 2007/08 has showed a slight decline due to different problems; the account appears to be largely thorough.</td>
</tr>
</tbody>
</table>

* gross enrolment rate has been decreasing with the exception of the 2006/07 academic year’. (Gross enrolment rate is illustrated with statistical data).
  - para 369 highlights prevalent deficiencies in the state’s endeavours to secure the right to education. (e.g. ‘the levels of net enrolment and disparities between male and female enrolment are still visible’. It is significant, though, that there is no candid recognition of any diminution in the achievement of the right.

iv) The Right to Health:
  - there is recognition of continuing inadequacies: (para 271): ‘Though not adequate, the different policies and strategies adopted to modify the situation have brought about immense change...’ and (para 278) ‘...the subsequent year 2007/08 has showed a slight decline due to different problems’. (interesting that there is no specific statistic demonstrating the extent of the decline, and
| a) Tanzania | i) The Right to Work:  
very cursory analysis, primarily focussing on initiatives to increase employment; there is a brief discussion of unemployment, para 53 noting that 1.0 million males and 1.3 million females were unemployed, this being equivalent to 11.0 per cent compared to 12.9 per cent in 2000/01. In urban centres unemployment was 16.3 per cent in 2005/06 compared to 2000/01. | Yes (although not necessarily in response to this particular report) (e.g.):  
http://www2.ohchr.org/english/bodies/cedaw/docs/ngos/HAITanzania41.pdf;  
http://www.globalrights.org/sites/default/files/docs/LGBT_Shadow_Report_TANZANIA.pdf (although this seems more appropriate to the ICCPR)  
- although there is some recognition of the difficulties faced by Tanzania in relation to unemployment (see column i), there is no mention of declines in the state’s performance.  
ii) Right to Social Security:  
- no mention of any challenge; let alone the prospect of deterioration.  
iii) Right to Education:  
- there is some recognition of outstanding deficiencies, especially in the Primary Education Sector (para 140). There does not, however, appear to be any discussion of a decline in performance.  
iv) The Right to Health:  
- para 115: this recognises an explicit decline in life expectancy: ‘according to the country health system fact sheet of 2006, the life expectancy at birth for both males and females in 2004 stood at 47 and 49 |

b) Combined initial, 2\textsuperscript{nd} and 3\textsuperscript{rd} periodic reports  
c) 27\textsuperscript{th} March 2011
Tanzania’s enforcement of other rights. It provides a detailed account of the initiatives introduced to improve access to education, as well as statistics on access and quality (for example, para 139: ‘the quality of primary education performed impressively with the pass rate improving from 28.6 per cent in 2001 to 61.8 per cent in 2005 and the Book-Pupil ratio from 1:20 to 1:3 between 2001 and 2006, and para 152, which provides data on government expenditure on education). - there is also some appreciation of the challenges besetting the primary education sector, including inadequate trained and qualified teachers.

iv) The Right to Health:
- the report’s discussion of Article 12 is also relatively extensive. It provides statistics on expenditure (indicative of increasing efforts to realise the right) and existing and upcoming initiatives.
- it is intriguing to find, however, that there are very few details giving in connection with certain respectively, this is a decline from the life expectancy at birth that was in 1990 i.e. 52 years. The recent decline in life expectancy is attributed to the impact of HIV and AIDS and other communicable diseases.’ Also, para 119: ‘HIV/AIDS was declared a national disaster in 2001 at the launch of the national IHV/AIDS Policy by the Government’.

- there is also some appreciation of the challenges besetting the primary education sector, including inadequate trained and qualified teachers.

iv) The Right to Health:
- the report’s discussion of Article 12 is also relatively extensive. It provides statistics on expenditure (indicative of increasing efforts to realise the right) and existing and upcoming initiatives.
- it is intriguing to find, however, that there are very few details giving in connection with certain
elements of realising the right to health, such as education: para 134: ‘there is a section on public health education within the Ministry of health and Social Welfare that provides education on health related matters. Education on health issues is also provided through newspapers and TVs.’

* It is important to observe that, whilst these particular rights are discussed in (relative) detail, other rights are largely neglected (see, for instance, the discussion of Arts 4 and 5, and Art 8).

<table>
<thead>
<tr>
<th>a) Cameroon</th>
<th>i) Right to Work:</th>
</tr>
</thead>
<tbody>
<tr>
<td>b) Combined second and third periodic reports submitted by States parties</td>
<td>- statistics provided on unemployment rate;</td>
</tr>
<tr>
<td>c) 19th July 2010</td>
<td>- the discussion (from para 315 onwards) notes a number of initiatives introduced to ameliorate employment access (see, for instance, para 324), and provides statistical evidence of the positive effects thereof. Nonetheless, it is noteworthy that the statistics are not comparative, such that, whilst the figures appear promising, they allow for no inference to be drawn about whether or not</td>
</tr>
<tr>
<td></td>
<td>Yes (not mentioned in report, and not necessarily pertaining to this specific report). e.g.:</td>
</tr>
<tr>
<td>i) Right to Work:</td>
<td>- para 318: acknowledgment of a MINEFOP (government organisation established in 2004) report suggesting that the economic recession caused an increase in the unemployment rate, a decline in the economic activity of the informal sector, and misconduct on the part of employers, entailing a reluctance to observe health and safety requirements, grant leave to employees, encourage</td>
</tr>
</tbody>
</table>
unemployment has substantially improved (see, for instance, para 325 on 2006 recruitment figures, which are ostensibly illustrative of a strongly proactive government policy).

ii) Right to Social Security:
- discussion of reforms and initiatives;
- but NO provision of statistics demonstrative of the present situation on Cameroon’s performance in relation to this right; rather the only indication that social security is compromised to some extent is a subtle reference to the need to restore macroeconomic equilibrium in para 376.

iii) Right to Education:
- extensive statistical data is provided to buttress the state’s points about the inadequacy of the system;
- there is, of course, fairly extensive discussion about the governmental initiatives undertaken to improve the situation.

iv) Right to Health:
- discussion of the right to health is extensive. Again, the creation of unions and promote the right to strike.
- para 320: provision of statistics on unemployment (nearly 17 per cent – 32 per cent in urban and 9 per cent in rural areas), with a recognition of the sociological consequences thereof (para 321);
- implicit recognition of insufficiency of employment: ‘the various problems arising from the prevailing weakness in the supply of paid jobs and from unemployment...’ (para 324) and ‘...prompted by a socio-economic context characterised by high unemployment and a worrying level of underemployment, in which the lack of a coherent and well-articulated document on national policy...appeared to hamper the decisive deployment of resources...’ (para 328).
- overall, in relation to this right, whilst there is no explicit recognition of declining performance owing to any factor other than the recession, and an absence of in-depth
there is extensive recognition of the reform initiatives implemented to improve the right to health. - there is, however, recognition of the weaker aspects: para 493, for instance: ‘the epidemiological profile of Cameroon...is dominated by infectious and parasitical diseases. The increasing trend in the prevalence of certain conditions, such as..., also gives grounds for concern.’ This is reinforced with some statistical evidence: para 494: ‘moreover, the epidemiological situation is aggravated by the HIV/AIDS pandemic, characterised by a national infection rate currently of 5.5 per cent’, para 495: ‘the health situation for mothers and infants continues to give cause for concern’ (Annex 5 provides supplementary information on this).

- More statistical evidence is provided to buttress the state’s assertion that improvements are being made. For example: para 498: the DPT 3 vaccination coverage rose from 43 per cent in 2001 to 72 per cent in December 2004.

discussion of the inadequate employment rate, the report does provide persistent recognition of the need for improvement. (note that the same is largely true for the discussion of Art 3 – existing deficiencies are acknowledged, but only as a ‘stepping-stone’ to introducing initiatives implemented to improve the situation (thus, para 312: ‘observation indicates that the principle of equality is not fully observed in practice’).

ii) Right to social security: - the preceding comment is also applicable to the discussion of Art 9. Thus, para 376: ‘in seeking ways and means to restore the major elements of macroeconomic equilibrium [presupposing an imbalance]...Cameroon has decided...to upgrade...’

iii) Right to Education: - some recognition of regional inequalities: para 552: ‘however, a number of regional disparities may be observed, particularly in the extreme north and the east of the country’ and
the right is further segregated into 'safeguarding the health of children', 'protection of maternal health', 'monitoring of certain health programmes', and 'improvement of the population’s access to essential medicines', under each of which is further elaboration into the initiatives taken and the current predicaments (though, on the latter of which, there is a relative lack of discussion).

* The foregoing would suggest that the report is fairly uniform in its discussion of rights; it is noteworthy, however, that other rights are given hardly any attention (notably, article 4 and 5). The article 5 commentary is simply this: para 314: ‘respect for the integrity of economic, social and cultural rights is a pre-requisite for the legality and legitimacy of any restrictions that the government may impose’. Thus, whilst there is perhaps little selectivity with regard to the discussion content for rights addressed in detail, there is selectivity insofar as

(553) ‘in 2005, the shortage of sitting places in secondary education was 1.6 million, while in higher education there were first-year places for less than one third of the number of new high school graduates’.

- para 554: (recognition of decline in the rate of improvement: ‘the number of pupils aged 6-15 increased by 15 per cent between 2000 and 2005...and is expected to increase by merely 7.6 per cent between 2010 and 2015.’

- 5558: ‘unmet quantitative and qualitative needs with regard to teachers are a constant’.

- overall, in relation to this right, there is persistent recognition of the need for considerable improvement, and a candid expression of the current failings. There is, though, hardly any expression of actual decline.

iv) Right to Health:
- see column (i), which adequately summarises the position. In short, the answer is that there is some appreciation of
| some rights are hardly discussed. | prevailing inequities; though there is not any explicit recognition of decline. |

* State;  
° Report description (as recorded on the OHCHR treaty database, appropriately abbreviated).  
‡ Publication date.
