Future research

- Understanding and better articulating the circumstances in which making construals is likely to be appropriate, and lead to better learning outcomes
- Deeper consideration of the mechanisms involved in learning of relevance to making construals, and how making construals creates the right contextual conditions for such mechanisms to fire
- Gathering evidence to prove that making construals is more effective in particular circumstances than prevailing approaches in realising particular outcomes
- If proof exists that making abstract concepts more concrete and doing so by creating an environment that allows exploration – this suggests claims made in Empirical Modelling that building artefacts in this way (ODA) have some credibility – further work should be undertaken to explore and seek to prove this
- Massive strides in the CONSTRUIT environment – more that can still be done to make it more accessible and easy to use
